

Onsite Data Destruction

Asset Remarketing provides a specialist on site 'Secure Data Destruction' service which enables your organisation to securely destroy all aspects of data from any obsolete digital media devices.

The data destruction services offered have been created to work with Data Protection and ITAD security policy of any organisation, delivering proof of compliance and ensuring security standards.

Asset Remarketing's on Site Data Destruction service, can process all data bearing devices on site in front of customers, without the risk of transporting media. During the process, you will witness the data destruction and you will receive all essential security documentation, including the Certificate of Destruction and a fully itemized asset report.

- You remove the media device beforehand (or we can)
- Our engineer sets up the destruction process on your site
- The devices asset details are recorded and then it is processed rendering it completely useless
- When all of your devices have been destroyed, you can verify the destruction
- Asset Remarketing then takes the waste devices away

Key features

1. This is a unique ON or OFF site Data Destruction Process
2. Process meets CESG and Data Protection standards for destroying data
3. Fully auditable process, complete serial number tracking
4. Protects against Identity and Data Theft and loss
5. Ensures organisations meet New Data Protection Laws

Pricing matrix
